

GSF Project Proposal form TIER

name	Taiwan Institute of Economic Research(TIER)
about	Develop and promote Green Software Labeling mechanism.
title	Green Software Label Initiative Proposal
labels	Green Software, Label, Labeling
assignees	Mei-Lian Wei(TIER)

1. **Working Title:**

Green Software Label Initiative

2. **Related issues or discussions:**

To drive efficiency in digital transformation, optimize resource utilization, and raise awareness of software carbon emission, Taiwan is currently establishing a Green Software Label framework to steer the growth of green digital services. This proposal builds on discussions between TIER and GSF in August and September 2026. TIER submits this proposal to GSF after informing Taiwan's Ministry of Digital Affairs (moda).

3. **Tagline:**

Green Software Labeling for Green Software Design.

4. **Abstract:**

Taiwan Institute of Economic Research(TIER) and Taiwan Innovative Software and Services Association(TISSA) have worked together with the support of moda to establish a voluntary green software labeling framework, which includes Software Carbon Intensity Calculation (ISO 21031), sustainable design commitment, personnel certification, software's minimum supported lifespan, hardware minimum supported specifications and expected lifespan, OS compatibility, and a continuous improvement mechanism. Currently, Taiwan is conducting a proof of concept(PoC) for the green software labeling scheme.

5. **Audience:**

Every software professional and sustainability-minded enterprise committed to ESG principles.

6. **Governance:**

GSF's Software Standards Working Group

7. **Problem:**

The digital economy constitutes an integral part of the global economy and remains its fastest-growing sector. As the impacts of global climate change intensify, digital transformation should carry a vital responsibility to advance environmental sustainability and green growth.

Green software effectively mitigates the environmental and energy footprint of digital solutions through algorithmic optimization, computational load reduction, and enhanced resource utilization efficiency.

8. Proposed Solution:

The Green Software Label initiative aims to raise enterprise awareness of green software and encourage organizations to integrate green software practices into their core business operations.

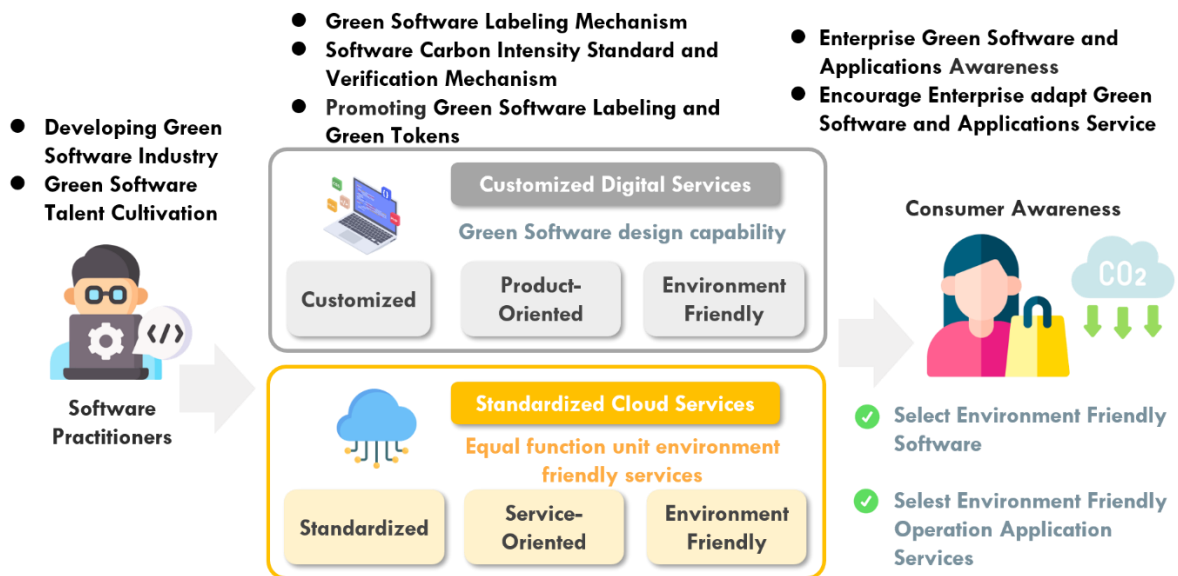

Figure 1. Promoting Green Software and Applications (e.g., AI)

9. Closure:

More influential enterprises and their products join the green software label initiative.
